

LaCie Backup Software

LaCie Genie Backup Software—Windows OS

With LaCie Genie Backup Software, users can choose among three levels of data protection. All versions of LaCie Genie Backup Software make it easy for Windows users to keep important files safe and secure.

LaCie Genie Backup Assistant

LaCie Genie Backup Assistant offers an ideal solution for the home user who is looking for a user-friendly way to back up personal data to a safe location and be able to retrieve it easily.

- File backup: make sure you never lose any of your pictures, music, or documents.
- Restore previous versions of your files with ease.

LaCie Genie Backup Manager

LaCie Genie Backup Manager helps users back up their files and offers an additional "Computer Recovery" function, which ensures that PC users will be able to recover quickly and efficiently from a system failure or a similar problem.

- File backup: make sure you never lose any of your pictures, music, or documents.
- Computer Recovery: restores your computer to its original state.

LaCie Genie Backup Manager Pro

LaCie Genie Backup Manager Pro is the strongest backup solution for small and medium businesses that want to back up and recover their entire system.

- Reliably and efficiently back up your digital assets including documents, emails, and settings.
- Easily restore previous versions of critical documents.
- Computer Recovery: restores your computer to its original state.

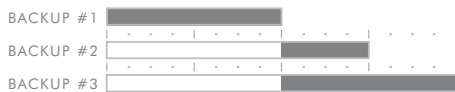

System Requirements: Intel Pentium® III processor or above • 512 MB RAM (1 GB RAM recommended) • 50 MB free hard drive space • Operating System : Windows® 2000, Windows XP™, Windows Vista™ (32-bit x86) and (64-bit x64) platforms • Software: Microsoft® Internet Explorer™ 6.0.0 or later • Configuration: Flash Player

Benefits of Backup Software

By definition, backup software regularly copies your important files to a second form of media that is able to restore it later. Synchronization ensures that two or more locations contain the same up-to-date files, while archiving simply moves the files to another location. To differentiate further, the term "computer recovery" is not the same as regular backup, either. Computer recovery makes a backup of your entire system in case of a major computer failure.

DIFFERENTIAL BACKUP

Backs up all files changed or added since the last full backup.

Backup size	<input type="text"/>
Backup time	<input type="text"/>
Restore time	<input type="text"/>
Multiple versions	Yes

FULL BACKUP

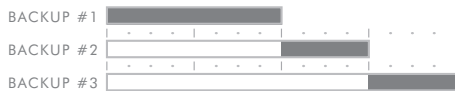

Backs up all selected files each time the backup job is run.

Backup size	<input type="text"/>
Backup time	<input type="text"/>
Restore time	<input type="text"/>
Multiple versions	Yes

INCREMENTAL BACKUP

Backs up all files that have changed since the last backup (full or incremental).

Backup size	<input type="text"/>
Backup time	<input type="text"/>
Restore time	<input type="text"/>
Multiple versions	Yes
