

# LaCie Backup Software

The "One-Click Backup" Solution

## Features

- Backup is as easy as one click
- No need to configure confusing functions
- Fast and simple for anyone
- Save important data on external hard drives

## System Requirements

Any Mac or PC with one of the following OS:

- Windows 98 SE, 2000, Me, XP
- Mac OS 10.x

## AS EASY AS ONE CLICK

LaCie invites you to enjoy the "One-Click Backup" solution. Use the LaCie Backup Software to archive your important files on an external hard drive in just one simple click. With this software working for you, there is no longer any need to configure complicated and confusing incremental, scheduling, or password securing functions.

## RAPID BACKUP FOR EVERYONE

LaCie Backup Software makes archiving so simple that almost anyone can easily store important personal or professional files onto external hard drives. Great for beginners, home-users and busy professionals, it's the quick storage solution for everyone. This easy software is broadly compatible with Windows 98SE, 2000, Me, XP and Mac OS 10.x.

## SMART SOFTWARE DOES ALL THE WORK

This software features HDD detection via a message that indicates if your disk is not properly connected to your computer. In addition, it even detects if your hard drive has enough space to save all of the selected files, and if not, it recommends suppressing older archives.

## CUSTOMIZED "ONE-CLICK" CONTROL

The user launches the backup from their desktop by pressing "Ctrl+S" or clicking on the "LaCie Backup Software" desktop icon or by selecting the name of the software from the program list. The default source is the "My Documents" directory, which can be changed or extended by the user. The default target is "External HDD" and the default backup folder is "date\_MyDocument\_ID" which can both be changed as well.

- Compatible with Windows and Mac OS
- HDD detection with automatic message
- Choose keyboard command, desktop icon or pull-down list
- User can modify default source, target and folder
