

# USB 2.0 PCI Card

DESIGN BY SISMO

## Increase Your Connections with Four USB 2.0 Ports

### Get Connected

Add four additional external USB ports to your computer with the LaCie USB 2.0 PCI Card designed by Sismo.\* Made for users who want to upgrade their Mac® or PC desktop, it's the quick, easy and affordable way to expand connectivity. The unique, exclusive design by Sismo comes with a dedicated gripping pad for ESD protection. The LaCie USB 2.0 PCI Card design by Sismo is a fully functional USB 2.0 host, supporting High-Speed (HS), Full-Speed (FS) and Low-Speed (LS) operation. It also offers full backward compatibility with USB 1.1 devices (at 1.1 speeds).

### Benefits of USB

The USB interface is cross-platform, meaning you can use your USB peripherals on both Mac and Windows systems. Currently, many peripherals come with USB, such as digital cameras, camcorders, CD/DVD drives, external hard drives, scanners, and more. Hi-Speed USB 2.0 provides the necessary fast data transfer rates that today's external devices require. Conveniently, there's no need to shut down or restart your computer when adding or removing a USB device because they're hot-swappable.

### Easy To Install and Use

The LaCie USB 2.0 PCI Card is plug & play, so just plug it in and it's ready to go to work for you. Once your device is connected, your computer recognizes it and automatically configures the necessary software. It's driver-free for Mac OS X 10.5 or higher and Windows® XP, Vista®, and 7. One standardized port and plug combination makes it simple and quick to connect and use.

### Hub Expansion

With USB ports on your computer, you can connect many peripherals using hubs—a method called daisy-chaining. Technically, you can connect up to 127 devices to a single USB bus; for more than two devices, though, you must make new connections using a hub. A hub, which you hook up directly to a USB connector on your computer, usually has four or seven output connections enabling you to connect the same number of peripherals. In order to achieve the fast transfer rates of USB 2.0, you must connect your USB 2.0 device directly to a USB 2.0 port on either a computer or hub.
