
Version v6.1.0

CHG: Build with .Net 2.0 instead of .Net 1.1
CHG: ExtremeZ-IP updated to version 5.1
NEW: Added compatibility with LaCie Ethernet Agent (add Bonjour and change IPConfigurator)
FIX: Problem CPU from ED.exe
FIX: Blank administrator password not admitted (web page)
FIX: problem from adding ED in domain (web page)
FIX: display bug for timezone (web page)
FIX: name of ED could not accept spaces (web page)

Version v6.0.1

CHG: ExtremeZ-IP updated to version 5.1
NEW: Added compatibility with LaCie Ethernet Agent (add Bonjour and change IPConfigurator)
FIX: Problem CPU from ED.exe
FIX: Blank administrator password not admitted (web page)
FIX: problem from adding ED in domain (web page)
FIX: display bug for timezone (web page)
FIX: name of ED could not accept spaces (web page)

Version 5.2.0, 6.0.0

Date: 2006-12-07

Author: Per Dunberg, Christophe Eveno

NEW: Rebuilt system with Service Pack 2
CHG: Public shares sorted in alphabetic order
FIX: Images not rendered when creating a public share named "images"
FIX: Groups not displayed when in Workgroup mode
FIX: NTBackup in advanced mode to don't have wizard error

Version v5.1.3

CHG: ExtremeZ-IP updated to version 5.1
NEW: Added compatibility with LaCie Ethernet Agent (add Bonjour and change IPConfigurator)
FIX: Blank administrator password not admitted (web page)
FIX: problem from adding ED in domain (web page)
FIX: display bug for timezone (web page)
FIX: name of ED could not accept spaces (web page)

Version v5.1.2

This version update the time zone

CHG: Updated the time zone

Version 5.1.1

The version 5.1.1 just add the pagefile.sys

CHG: added a registry value to add a pagefile

Version 5.1.0

NEW: Updated the .NET Framework from version 1.0 to version 1.1

NEW: Added a quick format function

CHG: Replaced the "IP Configurator" server application with a Windows service

CHG: Added new HTTP browsing component to replace the inbuilt IIS HTTP browsing

FIX: Time out error when trying to edit shares when joined to a Windows domain (>2000 users)

FIX: Password is now set for the "MyUser" account

FIX: The "public" share cannot be deleted

Version v5.0.5

CHG: ExtremeZ-IP updated to version 5.1

FIX: Blank administrator password not admitted (web page)

FIX: problem from adding ED in domain (web page)

FIX: display bug for timezone (web page)

FIX: name of ED could not accept spaces (web page)

Version v5.0.4

This version update the time zone

CHG: Updated the time zone

Version v5.0.3

The version 5.0.3 just add the pagefile.sys

CHG: added a registry value to add a pagefile

Version v5.0.2

The version 5.0.2 is primarily released to provide full compatibility for the Intel-based Macs and the Tiger OS.

NEW: AFP server update for full compatibility for Intel-based Macs and Mac OS Tiger (including support for Spotlight)

CHG: Added possibility to rename shares

CHG: Protocol checkboxes are disabled if the corresponding service has been disabled

CHG: Improved the function to enable/disable file sharing services.

CHG: Added possibility to initialize external disks that contains no partition or an

unsupported file system.

CHG: Enabled the Windows Time service to fully support Kerberos domain authentication

FIX: Fixed error 3011 that is sporadically reported in the system log

FIX: Fixed vulnerability in TCP/IP that could allow denial of service.

Version 5.0.1

The version 5.0.1 is released to fix minor issues and improvements reported for the version 5.0.0 software.

FIX: Under certain conditions when updating a share the new settings are applied to one of the other shares

FIX: Backup jobs are not scheduled at the correct time if the time zone setting has changed

FIX: No error message is displayed if a share was not successfully removed

FIX: Duplicated rows of users/groups can appear in the assigned permissions list

FIX: Memory leak in Windows file sharing service can cause the system to stop responding

CHG: Added support for removable disks when scheduling backup jobs from the web admin pages

CHG: Added friendly message for error 2691 when trying to join a windows domain

CHG: Users and groups are sorted in alphabetic order when editing shares

CHG: Added message box to inform the user that they need to login in as a Domain Admin

in order to assign permissions for domain users/groups (if joined to a domain)

CHG: Added images for the different system log event types (information, warning and error)

CHG: Removed the web application debug option from the Diagnostics application

CHG: Increased all the list boxes from 5 to 10 rows

CHG: General improvements for the software update function

CHG: General translation updates

CHG: Disabled shares are now listed in the shares list

CHG: Keyboard shortcut Ctrl+Shift+Esc (Task Manager) has been enabled

CHG: Keyboard shortcut Alt+Tab (Switch between open applications) has been enabled

version 5.0.0

NEW: AFP v3.x support

NEW: Bonjour Support

FIX: Shares sporadically appears to be empty when connecting over AFP

FIX: Cannot copy files over AFP that contains non-valid Windows characters

FIX: Cannot open/save files over AFP with some specific applications

FIX: Cannot copy files over AFP that ends with space characters

FIX: Error -50 when copying files that uses a resource fork (Mac OS 9)

FIX: Error -50 when copying hidden system icon resource file

FIX: When copying data from one share to another the AFP server stops responding.

FIX: Shares appear empty when connecting with a user which has been assigned read only permissions

FIX: Cannot copy files bigger than 2GB

FIX: Cannot copy files with a filename longer than 32 characters

CHG: General improvements of the AFP file server

Version v4.0.4

The version 4.0.4 is released to fix minor bugs in the version 4.x software.

- FIX: Permissions not correctly set when editing shares
- FIX: NT Backup crashes when running the backup or restore wizard
- FIX: The schedule tab is not visible when adding a backup job using the NT Backup software

Version v4.0.3

The version 4.0.3 is released to fix minor bugs in the version 4.x software.

- FIX: Includes the fixes from version 4.0.1 and 4.0.2 (see below)
- FIX: Domain users and groups are not displayed in the list of members when editing groups
- FIX: Swedish translation corrected on the users page
- CHG: Includes the improvement from version 4.0.2 (see below)
- CHG: Added the possibility to create and edit hidden/administrative windows shares

Version 4.0.2

- FIX: English translation corrected on the backup page
- FIX: Shares sporadically appears to be empty when connecting over AFP
- CHG: Added possibility to adjust the time zone

Version v4.0.1

- FIX: Error 53 when trying to join a Windows Domain
- FIX: Error -36 when connecting over SMB using Mac OS X
- FIX: Cannot copy files over AFP that contains non-valid Windows characters
- FIX: Cannot open/save files over AFP with some specific applications
- FIX: Cannot copy files over AFP that ends with space characters
- FIX: Error -50 when copying files that uses a resource fork (Mac OS 9)
- FIX: Permissions not set when adding a share that contains space characters using the wizard
- FIX: Cannot view backup reports from NT Backup
- FIX: "Low virtual memory"-error after running the ED shell application for several hours.
- FIX: ASP Timeout errors when editing or deleting shares that contains many files and subfolders

Version 3.1.0

- FIX: Fixes the shutdown and restart problems from the web administration application
- FIX: Fixes the password expire for new users, now by default new users are created with no password expiration
- FIX: Fixes ASP time-out errors when enumerating shares
- FIX: Language settings are being saved for web administration application
- FIX: Added the missing text for one of the error messages when try to join a Windows

Domain

FIX: Fixes formatting of the public share names on the first page
FIX: Added missing image files for the the format progress bar

Version 3.0

NEW: Multi language support
FIX: Can not save permissions to share if not owner of the shared folder
FIX: Computer name longer than 12 characters not allowed (Max 15)
FIX: Fixed 10 user limit over AppleTalk
FIX: Submitting changes to the Administrators group generates script error
FIX: Workgroup name longer than 12 characters not allowed (Max 15)
CHG: Added list with number of connected users
CHG: Added possibility to change AppleTalk zone name
CHG: Added support for Incremental and differential backups
CHG: Added support for multiple backup jobs
CHG: Built-in groups and users are hidden using their SID
CHG: Graphical bars to present disk usage
CHG: Improved error handling
CHG: Improved function for retrieving and setting IP configuration
CHG: Improved function for setting permissions
CHG: Improved function to join domain or workgroup
CHG: Improved function to rename machine
CHG: Improved web interface performance
CHG: Message is displayed when unpartitioned or non-supported disk are connected
CHG: Possibility to add global groups in local groups (Windows Domain)
CHG: Possibility to enable/disable services (SMB, AFP and FTP)
CHG: Possibility to set IP address for Net over 1394
CHG: System presented as Windows XP Embedded
CHG: Size of the shares are presented
CHG: The shares list can be sorted by Name, Path or Size

Version 2.0.2

CHG: Improved restore functionality
The new system restore functionality allows you to restore the system to a previous state.
System Restore performs the following tasks:
a. Removes installed files and registry settings
b. Restores programs and system files
c. Restores the system without losing your personal files or password
d. Allows you to undo the restoration

Version 2.0.1

FIX: Fixed a problem with the HTTP permissions
Previously, under HTTP permissions, when changing from
Everybody (or Anonymous) to a specific user, all users still had access.
Now, only the specific user has access.

Version 2.0.0

New system image rebuild, primarily to add support for 25 users over SMB file sharing.

FIX: Support for 25 simultaneously connected users (SMB)
CHG: Added .NET Framework component
CHG: Added System Restore component
CHG: Added support for Dynamic Disks
CHG: Added Firewall component
CHG: Added Search component
CHG: Permissions controlled ONLY with NTFS file permissions
CHG: General improvements of the web interface
CHG: Disabled autorun function for external media

Version 1.3

CHG: Added option to disable the whole share in one button (instead of unchecking each box).
FIX: The administrator can now set permissions for users connecting via AppleShare.
FIX: Mac users can now access the Ethernet Disk as a Guest user
(as long as Guest is enabled)
FIX: Domain administrators: you can now administrate the Ethernet Disk in your domain
(previously, the Ethernet Disk recognized domain admins as users and not as administrators).
CHG: In the Ethernet Disk Web admin interface, under "SHARES," you can now see domain users.
FIX: Blaster Worm fix
CHG: To unify the share permissions settings for all protocols (FTP/HTTP/LAN)

Version 1.1

FIX: Added Mac user permissions per folder. Changed the mtObject.dll to make Administrator
and Everybody the default permission for newly created share.
FIX: Fixed the login bug for the users of the admin domain group.
FIX: Allowed external firewire disk to be part of a one volume spanned disk.
FIX: Fixed typo in the delete user confirm box.
FIX: Fixed a non working action in backup when using Netscape.
FIX: Several visual enhancements.
FIX: Changed the local security setting to allow guest account to log in from MacOS9
CHG: Disabled permissions box when the protocol is not enabled.
CHG: Added NT backup shortcut in the menu.
CHG: Allowed deletion of share folder even if not empty.
CHG: Added the dmconfig.dll to allow the disk manager to create dynamic disks.
This allows the creating of spanned disk.

Version 1.0.1

FIX: Increase the timeout in the upload script.
