*1GB = 1,000,000,000 bytes. Once formatted, actual available storage capacity varies depending on operating environment (typically 5-10% less).

**For computers equipped with a low-powered USB port, the bundled USB power-sharing cable helps turn the drive on by drawing extra power from a second USB port. An optional AC power adapter is available (sold separately) for non-powered USB hubs or boards, or for the rare computers that limit bus power.
